1.Kuramoto model for 10 oscillators (المواتورا براى الاله الوسائكر) (مدل كورا موتورا مهوتورا بهورين عليونين توهيون والموتور عليونين توهيون والموتور الموتور الموتور الموتور الموتور الموتور عليونين توهيون عليون والموتور الموتور الم

Coupling strength equal to 2

Time step 0.01

Final time of the system (to reach synchrony)

Display the phases of the oscillators over time as well as synchronization.

Hint(را منما یی):

Program to generate a random number between 0 and 9

importing the random module

import random

print(random.randint(0,9))

To understand this example, you should have the knowledge of the following Python programming topics:

- 0. Python Basic Output
- 1. Variables and Data Types
- 3. Conditionals (if, elif, else)
- 4. Loops5. Functions
- 6. Lists
- 7. Arrays
- 9. Using `NumPy`
- 11. Matplotlib12. Kuramoto model
- In []: def kuramoto_euler(...):
 """
 Simulates the Kuramoto model for oscillators using the Euler method.

 Parameters:
 ...

 Returns:
 ...
 """

 ...

 return ...

 def main():
 ...

 if __name__ == "__main__": # Ensure the script runs only when executed directly.
 main() # Run the main function.
